1 Ground truth
30 pinned Python libraries
750 target functions X
callers seen in test traces,
or found by both LocAgent
and jedi
2 Withhold one caller
LocAgent-format list for X;
C* (runtime-witnessed) is
removed; other entries stay
byte-identical (counts aside);
completeness: "unknown"
3 Vary the condition
no list
incomplete list (no C*)
+ generic caution
+ "not exhaustive" note
+ lexical hits for X
4 Gemma 4 agent
local, 8-response limit
read-only bash, name search
submit_answer: call sites
of X + completeness claim
(yes / no / unknown)
Also recorded
an exposure receipt for every episode
every tool call and token id
complete lists, to measure what the omission costs
Outcome: was C* recovered?
a submitted (path, line) falls in a site where C* calls X;
an episode that never submits counts as not recovered
list effect = incomplete list − no list; note and
evidence effects vs the plain list; library means, Holm
